SUMMARY

A Cloud and AI engineer with production level hands-on experience in Cloud Engineering and DevOps across cloud platforms like Microsoft Azure and AWS. Built, operated and containerized a Generative AI platform in production, owning deployment, troubleshooting, security and reliability. Develops Infrastructure-as-Code (IaC) with Bicep and Terraform, and automates delivery with CI/CD pipelines. Teaches Azure networking and DevSecOps to a global community, explaining technical concepts to non-technical audiences and people new to Cloud platforms.

SKILLS

- **Programming:** Python, JavaScript, React, Java, Bash, FastAPI, REST APIs, PowerShell
- **Machine Learning:** computer vision (YOLOv8), NLP, Scikit-learn
- **Platform Support & Operations:** platform administration, issue triage, ticketing, incident troubleshooting, access management, user onboarding, documentation
- **Cloud Platforms and Automation:** Microsoft Azure, AWS, Docker, Kubernetes, Git, GitHub Actions (source control)
- **Generative AI:** GenAI, large language models (LLM), RAG, prompt engineering, OpenAI API, Gemini API, LangChain, Qdrant, Claude, GitHub Copilot, Microsoft Copilot

EXPERIENCE

Franquicia Boost

Aug 2025 – April 2026

MLOps and AI Developer

- **Tech Stack:** Python, Qdrant, PostgreSQL, Docker, AWS, REST APIs, OpenAI API, FastAPI
- Developed a privacy-focused Retrieval-Augmented Generation (RAG) pipeline with the OpenAI API, Qdrant and FastAPI to enable secure, offline inference on sensitive internal data.
- Engineered a robust microservices architecture using Docker, separating storage and processing to resolve memory bottlenecks and optimize high-volume document ingestion, improving the efficiency by around 40%.
- Handled platform administration and production support: triaged server outages, resolved critical resource incidents, and managed SSL/Cloudflare security to maintain platform stability.

NextWork

Community Lead

Jan 2026 - Present

- Run Build and Brew, a weekly live session for NextWork's global community, building Azure DevSecOps and MLOps projects from scratch while learners follow along.
- Delivered 2 guest lectures to 20+ students at SAIT's Integrated AI program, covering the Gemini API and deploying it to Microsoft Azure through a CI/CD pipeline.
- Wrote documentation and user guides for a nine-part Azure networking curriculum (VNet, NSG, NAT gateway, peering, private DNS, load balancer, Network Watcher, Entra ID), each including an intentional failure to troubleshoot, verification and cleanup

Tech Connect Alberta

Nov 2024 - Present

Community Moderator

- Managed verification process for Discord server with over 3,000 users by implementing ticketing system and automated bots.
- Closed an average of 30 tickets per week while addressing user inquiries and troubleshooting access issues
- Developed and implemented Discord bots using Python for user verification and role assignment

PROJECTS

Azure Infrastructure-as-Code Pipelines:

- Provisioned Azure resources with reusable Bicep templates, deployed through GitHub Actions CI/CD. Completed hands-on governance, storage and networking builds.

PetroScan (SAIT capstone):

- Proof-of-concept for automated P&ID diagram analysis using YOLOv8 and Tesseract OCR. Served inference through a Dockerized Flask microservice and explored Azure deployment.

EDUCATION

- **Post Graduate Diploma in Integrated Artificial Intelligence** Sept 2024 - April 2025
Southern Alberta Institute of Technology
- **Post Graduate Certificate in Cloud Computing** Sept 2023 - April 2024
Humber Institute of Advanced Technology
- **Bachelor of Science in Information Technology** June 2019- April 2022
Lala Lajpat Rai College of Commerce and Economics, University of Mumbai
