SUMMARY

Cloud operations and AI engineer with hands-on experience across AWS and Microsoft Azure. Operated a containerized production platform on AWS, owning deployment, monitoring, incident response and availability. Builds Infrastructure as Code with Terraform, Bicep and Ansible, and automates delivery through CI/CD.

SKILLS

- **Programming & Scripting:** Python, Bash, PowerShell, JavaScript, React, Java, FastAPI, REST APIs
- **Platform Operations & Security:** incident response, monitoring and alerting (Prometheus, Grafana), access reviews, patching, runbooks and knowledge articles, Linux and Windows Server, networking (TCP/IP, DNS, VPN, firewalls, routing), Agile
- **Cloud Platforms and Automation:** AWS (EC2, S3, IAM, VPC, Lambda, EKS, CodeBuild), Microsoft Azure (VNet, NSG, Entra ID, load balancer, Azure Monitor, Network Watcher), Terraform, Bicep and Ansible, Docker, Kubernetes, GitHub Actions CI/CD, Git
- **Generative AI & ML:** GitHub Copilot, Claude, OpenAI API, Gemini API, LangChain, RAG, Qdrant, YOLOv8, NLP, Scikit-learn

EXPERIENCE

Franquicia Boost — Aug 2025 - Apr 2026

MLOps and AI Developer

- Designed and deployed a privacy-focused RAG platform on AWS as Docker microservices (OpenAI API, Qdrant, FastAPI, PostgreSQL), enabling secure inference on sensitive internal data.
- Modernized the architecture by separating storage and processing into containerized services, resolving memory bottlenecks and improving document ingestion efficiency by around 40%.
- Owned cloud administration and production support, reporting in daily Agile stand-ups: troubleshot server outages, resolved critical incidents and managed SSL/Cloudflare security.

NextWork — Jan 2026 - Present

Build Master

- Run Build and Brew, a weekly live session for NextWork's global community, building Azure DevSecOps and MLOps projects from scratch while learners follow along.
- Delivered 2 guest lectures to 20+ SAIT students on building an AI security scanner deployed to Azure via CI/CD.
- Wrote documentation and troubleshooting guides for a nine-part Azure networking curriculum (VNet, NSG, NAT gateway, peering, private DNS, load balancer, Network Watcher, Entra ID), each with a failure to troubleshoot, verification and cleanup.

Tech Connect Alberta — Nov 2024 - Present

Community Moderator

- Ran the ticket queue and verification workflow for a 3,000+ user Discord server using automated bots.
- Closed an average of 30 tickets per week, handling service requests and user inquiries, troubleshooting access issues and escalating what could not be resolved.
- Automated user verification and role-based access assignment using a Python bot.

PROJECTS

CI/CD and Infrastructure as Code Pipelines (Azure and AWS)

- Provisioned Azure infrastructure with reusable Bicep templates, promoted from staging to production through GitHub Actions. Built a Java build pipeline on AWS with EC2, CodeBuild and CodeArtifact.

Terraform and Ansible Automation (Azure)

- Provisioned a multi-VM Azure environment (VNet, NSG, load balancer, PostgreSQL, Azure Monitor) with modular Terraform and remote state, then configured Linux servers with idempotent Ansible roles.

CERTIFICATIONS

- **Microsoft Certified: Azure Fundamentals (AZ-900)**

EDUCATION

- **Post Graduate Diploma in Integrated Artificial Intelligence** — **Sep 2024 - Apr 2025**
  Southern Alberta Institute of Technology
- **Post Graduate Certificate in Cloud Computing** — **Sep 2023 - Apr 2024**
  Humber Institute of Advanced Technology
- **Bachelor of Science in Information Technology** — **Jun 2019 - Apr 2022**
  Lala Lajpat Rai College of Commerce and Economics, University of Mumbai
